De Vinne Italic 8pt 1900 / native source

Version 1.001; printed page 69, archive leaf 75.

John Ryan Foundry, Baltimore, United States, Latest and standard faces in type, printers tools and machinery, published 1894; historical publication in the public domain by age.

Complete point-labelled setting; prices are excluded from character coverage.

Native crop; neighbouring ink remains visible.

Observed g; threshold 175; advance 733

The Ryan g in Tumbling, at threshold 175, retains both native counters and a clearer loop junction than the census impression. The g in Vaulting remains comparison evidence because its upper bowl is broken at 175. The independent uniform scale, measured text baseline and italic slant are preserved. The existing 733-unit advance and 35-unit left bearing are retained. No strokes are drawn or assembled from other impressions.

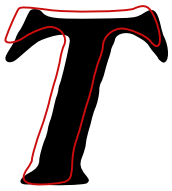

The complete glyph is traced from one impression. No holes are filled, strokes drawn, outlines assembled from parts, or widths stretched. One measured scale and rigid rotation preserve source proportions and the historical italic slant.

Independent capital comparison

Black: retained canonical capitals. Red outline: source impressions at one uniform scale.

8 capitals; scale 23.509621; RMS 17.87 font units.

T / ryan8-cap-16

Matching same-size optical design supported by common capitals and lowercase; no punch, matrix or first-casting identity claimed.

Threshold and contour comparison

Each trial uses the same independent capital scale and measured text-row baseline.

The black comparison outline is the retained census g; red outlines are Ryan impressions.

Selected: ryan8-text-17, threshold 175. Matching same-size optical design supported by common capitals and lowercase; no punch, matrix or first-casting identity claimed.

Desktop and web format comparison

Whole observed g; same source position and advance in all four delivery formats.

Previous census g in the same text and spacing

Existing advances and feature mappings are preserved. Only g is replaced; the lining R remains available through ss01.

Native text baseline

Red: measured baseline through independent whole-letter anchors. Source pixels are enlarged for inspection.

9 anchors; slope -0.00379056; baseline intercept 910.422190 native pixels. The target glyph does not determine its own vertical placement.

A rigid rotation corrects scan skew. No shear or individual width adjustment is applied. Source overshoots and printing differences remain visible.
